

Quantum Education

SCIO Energy Medicine

- SCIO - Latin: To know
- Acronym: Scientific Interface Operation System

- **QUANTUM** is the smallest amount of a physical quantity that can exist independently, especially a discrete quantity of electromagnetic radiation. This amount of energy is regarded as a unit.

- Biofeedback is a non-invasive therapeutic technology that energetically scans and harmonized the body's stresses and imbalances, and returns your body back to health by reducing the stressors that cause disease. Excess stress is the pathway to disease.

- The stress can come from many sources, such as toxicity, trauma, pathogens, mental factors, perverse energy, allergies, heredity, habits and deficiency syndrome. As the stress continues, the disease progresses.

● Stress starts by producing an alarm response in the body, which will provoke symptoms. If the stress continues, the body will go into an adaptation stage, which is symptom free. A lack of symptoms is not a sign of good health.

● The client can have a life threatening disease and be symptom free. Stress can be of many types; from toxicity, trauma, deficiency, perverse energy, pathogens, allergy, heredity and mental factors.

- Each cell in our body operates at a certain frequency. Our cells network together to keep our body in harmony. Stress produces erratic vibrations that lead to disharmony, followed by injury and disease.

- Viruses, bacteria, fungi and parasites all have resonant frequencies. We actively interact with frequencies all the time.
- Sound and color have frequencies and we experience changes in our moods, emotions and in our physical body as different waves of frequencies push against us.

This incredible advancement in medicine measures subtle electrical factors of the body. The electrical factors of the body include voltage, amperage, capacitance, inductance, frequency, and many others.

- From these calculations several other ramifications can be surmised. The reaction of the body to nosodes, isodes, allersodes, sarcodes, classic homeopathics, herbals, minerals, amino acids, enzymes, hormones, bacteria, fungus, parasites, nerves, vertrabrae, muscles, and thousands of other compounds.
- The computer can detect energetic aberrations and repair them automatically. This is like a rectifying circuit in your television.

- The basics of bioelectrical medicine lie in the voltage, amperage, and resistance.

- The only thing that can truly be measured in electricity is the voltage and amperage.

- Everything else is a mathematical variation of voltage and amperage.

The body is an electromagnetic static being with frequency patterns that have resonance, reactance, and self-correcting capacities. We can use energetic techniques for diagnosis and treatment of disease.

- At the level of the atom, we know that electrons whirl about the nucleus in certain energetically defined orbits.
- In order to move an electron from a lower to a higher orbit, a quantum of energy with very special frequency characteristics is required.
- An electron will only accept energy of the appropriate frequency to move from one energy level to another.

- This required atomic frequency is referred to as the “Resonant Frequency”.
- Atoms and molecules have special Resonant Frequencies that will only be excited by energies of very precise vibratory characteristics.
- For instance, the singer who is able to shatter a wine glass by delivering a high amplitude note does so by singing in the precise Resonant Frequency of the glass.

$$E=MC^2$$

E=Energy **M=Mass**

C=Velocity of Light

- What we see as solid matter is equally perceivable as energy. For example, water exists in 3 states: vapor, liquid and solid. Vapor is not always visible, but it exists.

- The molecules of water have more energy, are moving faster in vapor state than as a liquid. The term for this change in state or form is a Quantic change.

- This concept of Quantic change is the basis for modern physics. Physics has revealed that wherever there is energy, there is an electrical and magnetic component.

- Benveniste's research is based on the fact that molecules vibrate – a fact known for decades. These vibrations create electromagnetic signals. Millions of biological molecules can communicate at the speed of light.

- Identifying the specific electromagnetic frequency of different molecules allows modern science to diagnose and heal using sound or light to produce the specific electromagnetic frequencies needed – a discovery that continues to be ignored by established medicine.

MEASURING BODY ELECTRICITY

- Brain nerve cells, when stimulated, create electrical energy which activates nerves. This is recorded as brain waves by an electroencephalogram (EEG).
- The nerve activities cause muscles to shorten and move the body, and to stimulate the heart, lungs, blood vessels, intestines, and glands. When a muscle shortens, an electrical current is generated which can be recorded by and electromyogram (EMG).
- The electrical heart activity is picked up by an electrocardiogram (EKG).

- The human body is controlled and regulated by a Quantum Energy Field .
- Both Chinese and Ayurvedic medicines acknowledge a body system of meridians, through which flows an energetic and information-laden substance known as Chi.
- Every human thought and action is accompanied by electrical activity in the nervous system and by biophoton communication among cells.

- In the physical body there are two primary electrical systems. One is the well-known alternating electric current of the nervous system, the brain, neurons, and the nerves, which causes muscles contraction, nerve transmission, glandular secretion, and sensation.

- The other is a newly discovered electromagnetic system emanating from atoms and cells. This energy has been called an aura or an energy field.

- The external electromagnetic energy penetrates the body through acupuncture points and flows through the meridians into the whole field.
- It also flows through the connective tissues. The electromagnetic environment is a milieu in which life and physiological happenings occur.
- For all systems to be a “go”, a rich electromagnetic field must be present.

- The sun is the center of our solar system, and life could not exist without the sun giving off radiations that set up oscillations in living matter.
- In like manner, atoms are the center of our biological systems, and without the energy radiations emanating from our cells, our lives could not survive.

The sheaths surrounding the nerves are not merely insulation as described in established biology but are “real wire” that “reach into each area of the body to create a normal electrical environment around each cell, or a stimulatory one when healing growth is needed.”

ENERGY MEDICINE

- The body's first signal that all is not well is vibrational or electromagnetic.
- Damaging frequencies are stored in cells. These damaging waves may build up unnoticed for years.
- Chemical changes begin to appear later. Bacteria, viruses and other pathogens take hold.
- Lifestyles can create damaging frequencies that could be detected long before physical symptoms erupt.

- ◆ **The interplay of the physical with the subtle bodies is controlled by a central force, called the “Vital Force”.**
- ◆ **This encompasses the various acupuncture meridians in the physical body and connects the chakra systems within each of our bodies.**

- **“Chakra” is a word which means “wheel”. Thus, a chakra is a wheel of energy that can be thought of as a vortex. A vortex is a funnel of spinning energy opening into higher dimensions.**

- **Once the spinning vortexes of the Vital Force are established, there is no room for disease and the sick are restored to health. This is the process of energy medicine. Health is restored by the removal of the energy blocks.**

To fully understand the process of returning the body to health, one has to understand the electrical or subtle bodies as well as the physical body.

Any disruption or disease first manifests in the subtle bodies as an electrical interference which appears as a counter-wave signature.

- **The energy enters the chakra and goes to the energy channels, which send the energy into the physical nervous system.**
- **The nervous system transmits the energy to the endocrine system, which uses the various hormones present to send the energy into the bloodstream.**
- **The bloodstream passes the energy into each one of the cells in the physical body.**

The First Law of Energy Medicine

“Change the energy and you change the manifestation of the mass.”

The only true science that heals the conflict between the subtle bodies and the physical is a field of vibration that removes the blocking energy pattern.

**Energy medicine
involves changing the
frequencies of the
electromagnetic waves of
the auric field.**

“All living cells emit a radio signal.”

**How does the process of
changing the electromagnetic
field actually work?**

- **This is the process that has baffled medical science for years. The secret is buried in the understanding of the hypothalamus and the pineal gland.**

- **The hypothalamus controls the sine wave functioning in the body, and is the switchboard to the brain. It is within this gland that the energy is changed.**

- **The next organ that is activated in this process is the pineal gland. As the changes in the electromagnetic field take place, this special gland reads the blood as it flows through the body.**

- **Blood is electrical in nature and makes the necessary physical changes in the physical body, which is the natural process of energy medicine.**

↗ Any disruption or disease first manifests in the subtle bodies as an electrical interference which appears as a counter-wave signature.

↗ All disease is really misplaced energy in the wrong frequency.

Hertzian waves

- ① In nature there are two distinct energy patterns – Hertzian Wave and Standing Columnar Wave.
- ② The Hertzian Wave operates the physical body, while the Standing Columnar Wave constitutes the subtle bodies. The Vital Force is a combination of these two energy patterns acting in conjunction with each other.

**The only true science that
heals the conflict between the
subtle bodies and the physical
is a field of vibration that
removes the blocking energy
pattern.**

This is the simple concept that allows homeopathy, color therapy, magnet therapy, sound therapy, and flower essences to work.

In their purest forms, they are all forms of energy medicine that work to restore the balance which, in reality, is what medicine is all about.
